

Containerized Maintenance Facility

NSN: 4940-01-514-5661

System Description

The CMF is a combination of tactical rigid wall shelters and Standard International Standards Organization (ISO) containers grouped together into a system that will be used to provide the principal support maintenance for Army watercraft deployed worldwide in improved and unimproved ports. The CMF will replace the now obsolete Floating Machine Shop (FMS). The system will be a stand-alone maintenance support package with its own power generation/distribution system, but will have the capability to use commercial power sources as well. These shelters and containers will contain the essential support shops found in a Floating Craft Maintenance Company.
